DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 18-24, 26-29, 42-44, 47 and 50-51 are rejected under 35 U.S.C. 103(a) as being unpatentable over mathworks.com, (February 9th 1999 Internet publication) in view of Chaudhuri et al. (US patent 6,223,171)

Mathworks.com shows all of the limitations of the claims except for specifying the data filtering steps.

Mathworks.com shows an integration software system. MATLAB, which is short for matrix laboratory, provides a system that can combine many different tools in order to solve particular classes of problems. One of the toolboxes is the "Financial Toolbox". The "Financial Toolbox" requires the services of the "Statistics Toolbox" and the "Optimization Toolbox". The "Financial Toolbox" can perform many different types of analyses based on a large database of information (information can include price, yield sensitivity, i.e. parameter limiters) on many financial instruments. In support of the "Financial Toolbox", the "Statistics Toolbox" can produce a histogram frequency and observed values (categories). The GUI tools support the above toolboxes. These interactive GUI displays allow one to explore data, experiment with changes to inputs, and view the results of hypothetical changes – all in a single screen (displaying).

Art Unit: 3627

Methods of using these tools for individual specific applications have been anticipated and are inherent features of the mathworks.com system.

Chaudhuri et al. teaches, figure 9, a What-if Index analysis utility for database in order analyze the potential impact on the performance of the database base upon a hypothetical configuration. Figure 9 shows an iterative (i^{th}) filtering process (note column 18, lines 31-32 for successive filtering) to create sets and subsets of data to be used for each hypothetical analysis.

Based on the teaching of Chaudhuri et al., it would have been obvious to one of ordinary skill in the art, at the time the invention was made, to modify the Mathworks.com system to use the Chaudhuri et al. system of data mining database in order analyze the potential impact on the performance of the database base upon a hypothetical configuration.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the

Art Unit: 3627

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
